SR Bridge

Datasheet

Reliable SR technology for connected applications

The Xitanium SR Bridge can be used with existing luminaires to create a new SR system. The Bridge offers a quick and easy solution to control multiple luminaires with one or more SR sensors. The Bridge features all the elements of the SR interface like sensor power supply, energy metering (1% accuracy) and diagnostics. The SR sensor is connected to the Bridge via the SR interface while a group of luminaires can be controlled both via the Bridge DALI interface and the mains relay integrated in the Bridge.

Benefits

- One sensor for multiple luminaires
- Can be used in applications where SR drivers are not yet available e.g. point/downlight luminaires
- Can be used to retrofit SR certified sensors to an existing DALI installation
- Advanced mains power switching enables higher amount of drivers per MCB
- Also suitable for use with fluorescent and HID control gear

Features

- Full SR interface: SR power supply, energy metering, diagnostics
- Built-in mains relay to avoid standby power in case multiple drivers are connected
- Independent and built-in versions for different applications

Application

- Downlights
- Trunking
- Tracks
