Notes

Important info about dual power supplies:
1: DA power supply and auxiliary supply are short-circuit proof.
2: The DA supply is specified with a guaranteed supply current of 52mA and a maximum supply current of 60mA. Voltage is depending on loading and will vary between 12 and 20VDC. The DA supply is turned on by factory default and can be switched off through MultiOne software.
3: Auxiliary supply delivers 24VDC and is able to deliver 3W average power. Peak power capacity is 6W with 25% duty cycle (T=5.2ms). This supply cannot be switched off.
4: DA and auxiliary supplies share the same common negative terminal DA-.
5: Parallel connection of multiple auxiliary supplies is not supported.

Inrush current & fusing:
1: Driver inrush current is limited by randomly switching on at mains voltage zero crossing (IntelliStart).
2: Max. number of drivers per MCB/melting fuse is based on aggregate steady-state input current.
