SR Bridge

## Datasheet

# Reliable SR technology for connected applications

The Xitanium SR Bridge is used to control multiple luminaires with one SR sensor or to make existing luminaires sensor ready. The Bridge features all the elements of the SR interface like sensor power supply, energy metering (1% accuracy) and diagnostics. The SR sensor is connected to the Bridge via the SR interface while a group of luminaires can be controlled both via the Bridge DALI interface and the mains relay integrated in the Bridge.

### Benefits

- One sensor for multiple luminaires
- Can be used in applications where SR drivers are not yet available e.g. point/downlight luminaires
- Can be used to retrofit SR certified sensors to an existing DALI installation
- Advanced mains power switching enables higher amount of drivers per MCB
- Also suitable for use with fluorescent and HID control gear

### Features

- Full SR interface: SR power supply, energy metering, diagnostics
- Built-in mains relay to avoid standby power in case multiple drivers are connected
- Independent and built-in versions for different applications

### Application

- Downlights
- Trunking
- Tracks
